

Injectables

BOTOX/DYSPOORT

A non-surgical injection of a prescription medicine into muscles to temporarily improve the look of both moderate to severe facial lines.

Dermal fillers are injected into the face to help restore or enhance areas of volume loss. As we age, our face naturally lose fat, and such, the volume loss cause wrinkles that can be corrected with fillers.

WHAT DERMAL FILLERS CAN DO:

- Plump thin lips
- Enhance shallow contours
- Soften facial creases and wrinkles
- Improve the appearance of recessed scars
- Reconstruct contour deformities in the face
- Decrease or remove the shadow of the lower lids

Dermal fillers can be very helpful in those with early signs of aging, or as a value-added part of facial rejuvenation surgery.
